

T shirt quilt supply list. 8/10/09  
Donna Sinrud donnasinrud.com

Come with a design plan. With or without sashing and the overall size plan.

- Iron on fusible interfacing 10 yards ( I like medium)  
Fusible interfacing needs to be non-woven, glued only on one side and should not be paper-backed. Paper-backed interfacing usually means that both sides are glue-based
- Cutting supplies  
Cutting board, straight edge, sharp rotary cutter, large scissor
- large plastic cutting squares work great (12 ½ inch)  
This will be your clear plastic template and will be used to cut T-shirt panels. Bring the size to fit your design.
- Iron and ironing surface
- Fabric for the sashing and binding on the quilt top  
(You'll need 100 percent cotton fabric for the sashing and binding.)
- Safety Pins and sewing supplies
- Thread grey or to match sashing
- Quilt back (I use sheets most of the time. They are great for size and no seams.)
- Quilt batting
  
- 24 to 40 t shirts. (can use sweat shirts and other clothing) Prewash all T-shirts, but don't use softener on them. The T-shirt fabric will not adhere to the fusible interfacing when softener is used.
  
- sewing machine (quarter inch and quilting foot)
  
- extension cord
  
- any other items that you use in quilting, cutting and pressing.
